

Heated hoses

We are the worlds leading manufacturer of electrically heated hoses, for carrying liquids and gasses at maintained levels without heat loss.

A wide variety of materials as well as fittings can be utilized to allow for the handling of even the most corrosive materials and the hoses can also be designed to withstand high pressure applications.

Applications of our heated hoses:

Common applications for the low pressure variants include gas analysis systems, frost protection and chemical handling; whilst the high pressure alternatives can be used for sealant application equipment, plastic extrusion lines and hot melt adhesive equipment.
